

WE DID IT!

NAMA RUNFLAT TIRE

Run **300** miles under tire pressure **ZERO KPa***

* The Regular Standard is 50 miles; The test results are obtained under laboratory conditions;

* We still remind you to pay attention to safety and timely replace the damaged tyres.

Safe

When the tire is punctured and air leaks suddenly, the vehicle handling will not deviate significantly.

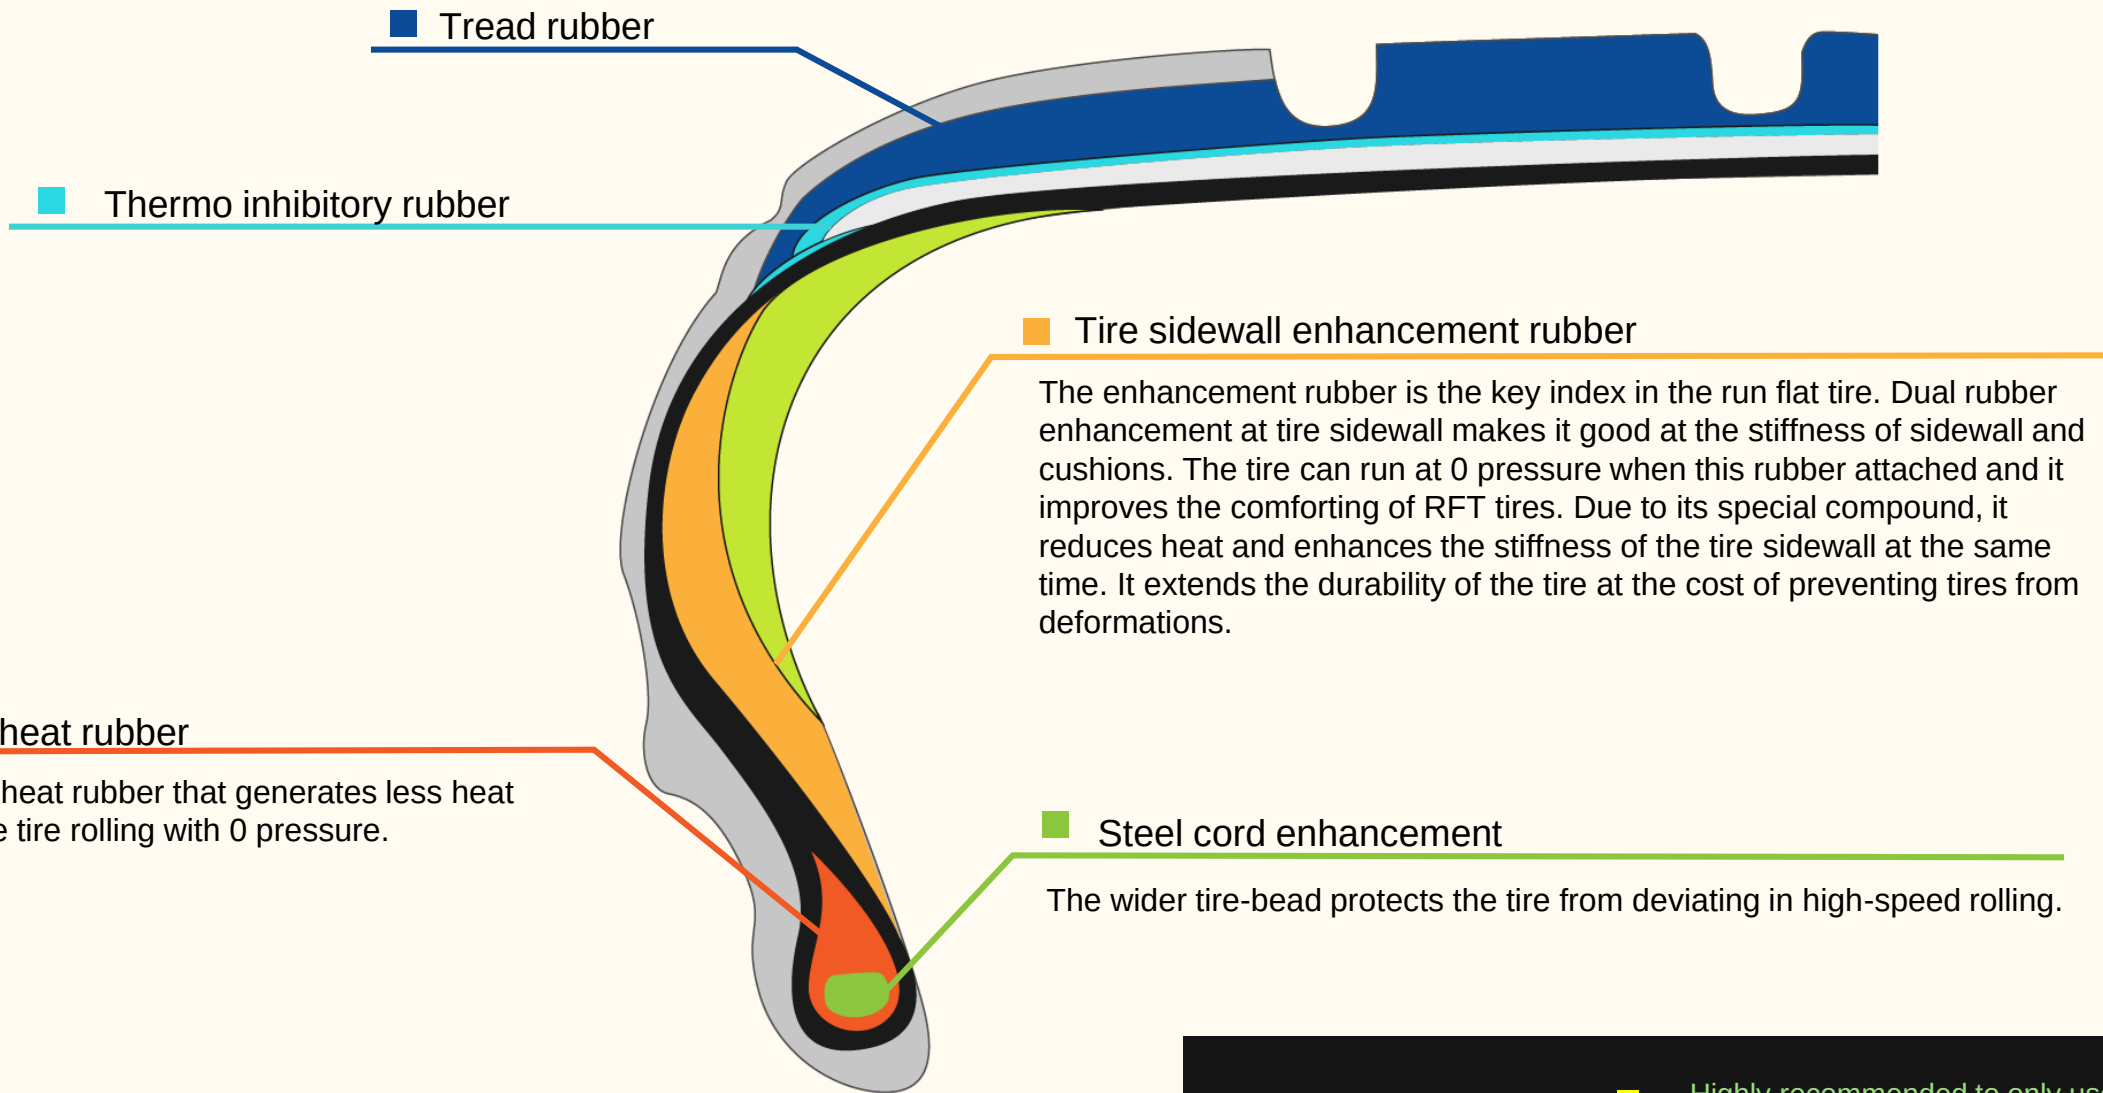

Safe

When the tire leaks, the vehicle can continue to move to a safe area,
with a maximum driving distance of **300 miles !**

proposal Highly recommended to only use run flat tires on vehicles equipped with a tyre pressure monitoring system TPMS

For your **SAFTY ,
we sacrificed
a little
comfort.**

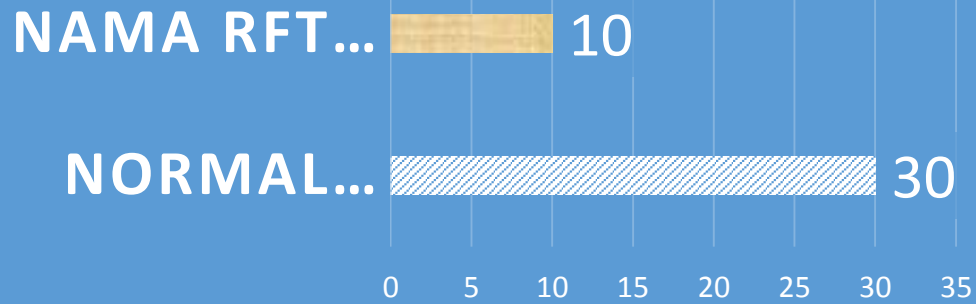

Amazing Testing Result

Better than all major brands in the market!

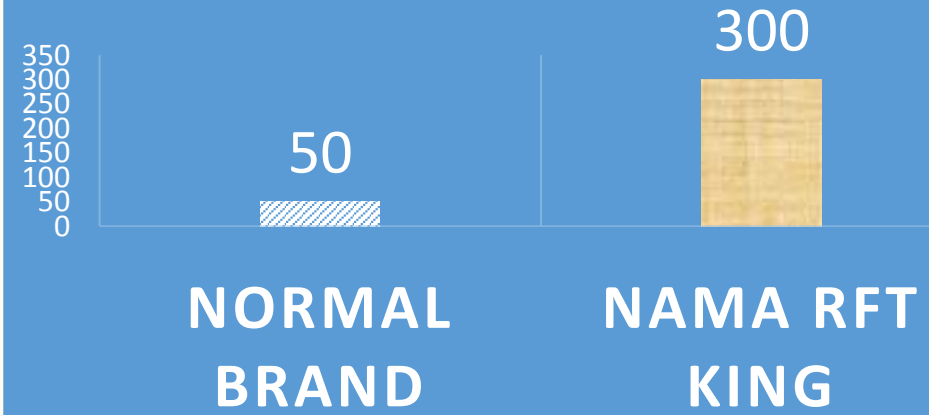

1

REINFORCED FORCE VARIATION (KGF)

2

MILEAGE UNDER 0 KPA (MILES)

1. Durability test :

International standard of RFT is running 80 kms, while NAMA RFT can run over **300 miles**, 6 times beyond the standard.

2. Reinforced Force Variation (RFV):

Because of RFT tire strong rigidity, the RFV is hard to control. The higher RFV, the poorer driving comfort and handling performance;

NAMA RFT RFV is 10kgf, better than the normal brands (30-40 kgf).
